

## **EPI 1 – Teen urbanists**

### **3. The fun part**

p. 111 – CD 3 piste 32 –  n°43

**Teenager 1:** We built this city on Rock... don't, don't film me singing!

**Voice over:** You've planned, marketed, and researched your virtual city. Now comes the fun part: building the model! This is your chance to give judges a 3-D look at what one section of your city would look like. Your model is not of your entire city. Choose a section that shows a variety of your city's best features. There are examples of past models on the website to inspire you.

**Bill T., Engineer Mentor:** You have to ask them, "What part of the city do you really want to demonstrate? What do you want to show people at the competition that is so unique about your city? What is innovative?"

**Voice over:** How did you pick what section of your city to model?

**Teenager 2:** It was the most culturally diverse as well as aesthetically diverse areas of the city.

**Voice over:** You may only spend a total of 100 dollars on all materials, including those used in support of your verbal presentation. Using recycled materials helps cut cost. Where do you find those materials? Hmm, let's see...

**Teenager 3:** All recycled materials, like a salad container... that's a disk.

**Teenager 4:** We had a hundred-dollar budget and we only used seventeen.

**Teenager 5:** Some of the buildings are made of shampoo bottles...

**Teenager 6:** We spent nothing on this project, actually. All of it was recycled.

**Teenager 7:** We built most our model out of bottle caps.
